HTML

Shared topic (Python FS + Java FS).

Previous (Python FS): Database Programming Bridge
Previous (Java FS): JDBC CRUD
Next: CSS and Responsive

About the Tutorial

HTML stands for HyperText Markup Language. It is the language used on the Web to write web pages. Hypertext is the way pages link to each other. Markup means the tags that tell a browser how to structure the page: headings, paragraphs, lists, images, tables, and forms.

This tutorial explains current HTML, the living standard implemented by browsers, with a short overview of each topic and a practical example.

Audience

This tutorial is for aspiring web designers and developers who need to understand HTML in enough detail to build pages, then continue with CSS and JavaScript.

Prerequisites

Before proceeding you should be able to:

- Use a text editor.
- Create directories and files.
- Save a file on the computer.
- Recognise image formats such as JPEG, PNG, and WebP.

Contents

Chapter	File
1. Overview and basic tags	HTML/01_Document_and_Tags.md
2. Elements and attributes	HTML/02_Elements_and_Attributes.md
3. Formatting and phrase tags	HTML/03_Text.md
4. Meta tags and comments	HTML/04_Head_Meta_Comments.md
5. Images	HTML/05_Images.md
6. Tables	HTML/06_Tables.md
7. Lists	HTML/07_Lists.md
8. Links, image maps, email, and iframes	HTML/08_Links_and_Iframes.md
9. Blocks	HTML/09_Page_Regions.md
10. Forms	HTML/10_Forms.md

Chapter	File
11. Multimedia	HTML/11_Media.md
12. Header, style sheets, and script	HTML/12_Style_and_Script.md
