5. HTML — Images

Index: HTML tutorial
Previous: Meta tags and comments
Next: Tables

Insert an image

`<img>` is an empty element. `src` is the file. `alt` is the text alternative, used when the image is not seen. `width` and `height` reserve space in CSS pixels so the layout does not jump when the file arrives.

Path	Example	Use
Same folder	`logo.png`	File beside the HTML file
Subfolder	`images/logo.png`	File inside this project
Parent folder	`../logo.png`	File one folder up
Full URL	`https://cdn.example.com/logo.png`	File on another host

A decorative image that adds nothing to the text uses `alt=""`. The attribute is still present.

`loading="lazy"` defers an image that is below the first screen.

Example

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Insert Image Example</title>
</head>
<body>
  <h1>Samosa</h1>
  <img src="images/samosa.jpg" alt="Two samosas on a steel plate" width="320" height="240">
</body>
</html>
```

This will produce the following result:

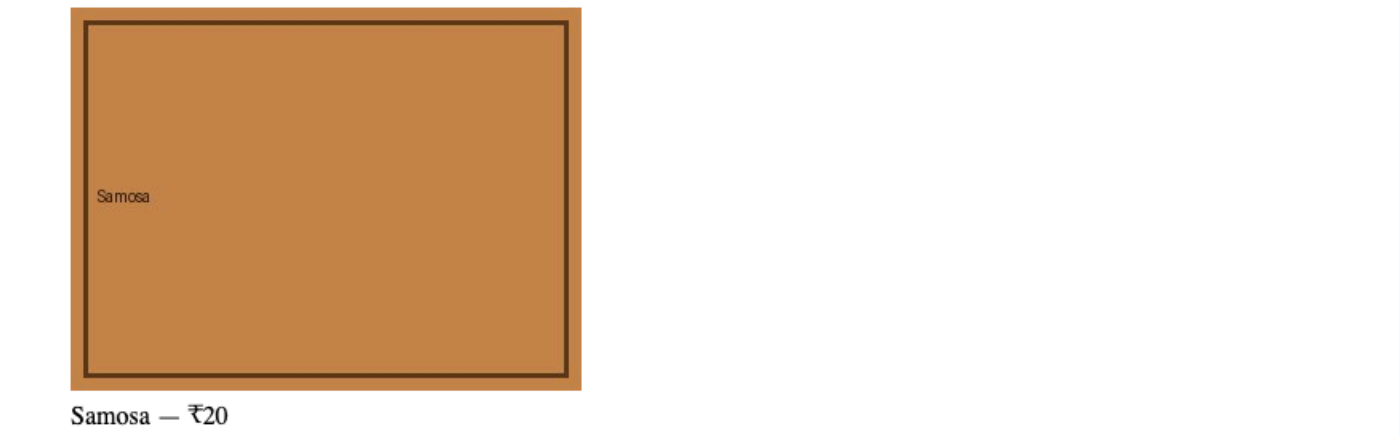

Figure and caption

`<figure>` groups the image with its caption. `<figcaption>` is the caption.

Example

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Figure Example</title>
</head>
<body>
  <figure>
    <img src="images/samosa.jpg" alt="Two samosas on a steel plate" width="320" height="240">
    <figcaption>Samosa — ₹20</figcaption>
  </figure>
</body>
</html>
```

This will produce the following result:

Picture and srcset

`srcset` offers the same picture at more than one resolution. The browser picks one. `<picture>` offers a different file type or a different crop. The `<img>` inside `<picture>` is required. `alt` stays on that `<img>`.

Example

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Picture Example</title>
</head>
<body>
  <picture>
    <source srcset="images/samosa.webp" type="image/webp">
    <img src="images/samosa.jpg" alt="Two samosas on a steel plate" width="320" height="240">
  </picture>
</body>
</html>
```

This will produce the following result:
