Ticket: Clean Duplicate IDs Before Import

Customer: Swiggy ops importing product / email lists
Need: Remove duplicates from a comma-separated list; preserve first-seen order.

Starter

Open `starter/dedup.py` — finish `deduplicate`.

Broken

`broken/dedup.py` loses order or crashes on empty tokens.

Done when

- [ ] `101,102,101,103` → unique count 3, order preserved
- [ ] Empty tokens after split are ignored
- [ ] Optional mode uses `set` (order may change)

Stretch

- Case-insensitive email dedupe keeping first-seen casing
