09 — Spring Boot

Package = seven files (`01`–`05` teach + `06`–`07` protected labs). File `08` is a **one-session** Servlet vs Spring interview map — not a Servlets/JSP track.

JPA + REST live **here** (not a second copy in `10_JPA_and_REST/`).

File	Focus	Calendar
01_Maven_and_Spring_Boot_Setup.md	Maven, Boot 3, `application.yml`	S66–S67
02_Spring_Web_REST.md	REST-first; Thymeleaf overview	S68–S70
03_Spring_Data_JPA_Validation.md	Entities, repos, `@Valid`	S71–S72
04_REST_DTOs_Postman.md	DTOs, Postman, error bodies	S73–S74, S82
05_Spring_Security_Lite.md	JWT lite (junior-realistic)	S75
06_Lab_CRUD_Auth_Consolidation.md	**Protected lab**	S76–S78
07_Lab_Deploy_Capstone_Debug.md	**Protected lab**	S79–S80
08_Servlet_vs_Spring_Interview_Map.md	Interview map only	S81

Spring Boot 3 / `jakarta.*`. JDBC already taught. Lombok is Stretch only.

Authored: Maven + Spring Boot setup (`01`), Spring Web REST (`02`), Spring Data JPA (`03`), REST DTOs / Postman (`04`), Spring Security lite (`05`), protected labs `06` (CRUD + auth freeze, kit 19) and `07` (deploy debug: Actuator health + env + PaaS attempt + capstone M0, same kit 19), and Servlet vs Spring interview map (`08`, kit 19 point-only — five comparison bullets, no new API / no kit 20). JDBC already taught. No OAuth2 / refresh / Lombok required. Next: CORS + API recap via existing `04` (then React).
