KEY — Biweekly Assessment BW01 — Weeks 1–2 (Trainer only)

Do not share with students. Excluded from student pack (`*_KEY.md`).

A. MCQ answers

1. **a** — Input → Process → Output
2. **a** — `.java`
3. **d** — ls
4. **b** — `HelloJava.class` bytecode
5. **b** — `studentName`
6. **b** — `2` (integer division)
7. **c** — Throws `NumberFormatException`
8. **b** — percent of subtotal
9. **a** — Show output on the screen
10. **a** — `String`
11. **c** — Code editor / IDE
12. **b** — `public static void main(String[] args)`

B. Coding — model points

1. Ask for a **TechMart** canteen item **price** and **qty**. Compute total with **5% GST** and print `Total: ₹…` with 2 decimals. Linear `main` only.
   - Award marks for correctness + teaching-order constraints respected (`Scanner` + `parseDouble`/`parseInt`, `* 1.05` or equivalent, `printf` `%.2f`).
2. Read three subject marks with `Double.parseDouble` and print average with 2 decimals. No loops / extra methods.
   - Three reads; `(m1+m2+m3)/3.0`; no `if`.

C. Short answer — model

Algorithm = steps in English/logic; program = those steps written in a language the computer runs (e.g. Java). Example: steps to compute GST vs a `.java` file that prints the total.

Suggested scoring

Section	Marks
A MCQ (1 each)	12
B Coding (6 each)	12
C Short	6
Total	**30**
