# Ticket: Contact Book

**Customer:** Placement cell
**Need:** Dict of name → phone; add, lookup, delete, list (menu).

## Starter

Build the menu in `starter/contact_book.py` (script style — no `def` yet).

## Broken

KeyError crashes in `broken/contact_book.py`.

## Done when

- [ ] Lookup missing name does not crash (use `.get` or `in`)
- [ ] Add / delete / list work from a menu

**Stretch (after Files / JSON week):** save and load `contacts.json`.
