Ticket: Optional AI Recommend Endpoint

Customer: CampusCart / TechMart stretch goal
Need: Given a short text review, return a tiny “sentiment” score using a simple sklearn pipeline (or a stub if sklearn not installed).

> **Note:** Optional — never blocks placement sessions.

Starter

Implement `score_review` in `starter/recommend.py`.

Done when

- [ ] Returns a dict `{"label": "pos"|"neg"|"neu", "score": float}`
- [ ] Empty text → clear error, no crash
