KEY — Biweekly Assessment BW01 — Weeks 1–2 (Trainer only)

Do not share with students. Excluded from student pack (`*_KEY.md`).

A. MCQ answers

1. **a** — Input → Process → Output
2. **a** — .py
3. **d** — ls
4. **c** — Immediately, line by line
5. **b** — student_name
6. **a** — float
7. **c** — f before the quotes
8. **c** — Raises an error
9. **b** — subtotal * 0.05 added to subtotal
10. **a** — Show output to the screen
11. **a** — str
12. **c** — Code editor / IDE

B. Coding — model points

1. Ask for a **TechMart** canteen item **price** and **qty** (use `float` and `int`). Compute total with **5% GST** and print `Total: ₹…` with 2 decimals. Linear script only (no `if` / `def`).
   - Award marks for correctness + teaching-order constraints respected.
2. Read three subject marks with `float(input(...))` and print their average with 2 decimals (f-string). No loops/`def`.
   - Award marks for correctness + teaching-order constraints respected.

C. Short answer — model

Algorithm = steps in English/logic; program = those steps written in a language the computer runs (e.g. Python). Example: steps to compute GST vs a `.py` file that prints the total.

Suggested scoring

Section	Marks
A MCQ (1 each)	12
B Coding (6 each)	12
C Short	6
Total	**30**
