Kasi Yedumati · Full Stack Training

Git and GitHub

Shared topic pack — used by Python Full Stack and Java Full Stack.
Not owned by `PYTHON/` or `JAVA/`.

Git is the same skill in both batches. Teach these files once. Do not copy them into a program folder.

Python FS schedule: Week 9 / S44–S45 — Session Calendar
Java FS schedule: Week 9 / S44–S45 — Session Calendar

Five sessions, about six hours. If live time is only S44–S45, run Sessions 1–2 in class and Sessions 3–5 as extra lab. Session 5 (IDE) can always be homework.

Teaching order

Order	File	Status
—	01_Git_and_GitHub.md	Course index
1	01_Git_Session1.md	Written — first GitHub push
2	02_Git_Session2.md	Written — daily loop + clone
3	03_Git_Session3.md	Written — branches + Pull Requests
4	04_Git_Session4.md	Written — sync, undo, conflicts
5	05_Git_Session5.md	Written — VS Code + PyCharm / IntelliJ

Work the sessions **in order**. Do not start with the IDE.

Not in this pack

Git internals, advanced reset, rebase, cherry-pick, reflog, detached HEAD, submodules, hooks, GitHub admin, multiple branching strategies, and long command lists.

Labs

Kit	When	Ticket
labs/01_git_portfolio_hygiene	After Session 2	Fix `.gitignore` + write a README a teammate can run
labs/02_git_desk_incidents	After Session 4	Resolve planted ignore, conflict, and related incidents

Type-along files are `README.md`, `.gitignore`, and `NOTES.txt`. You do not need Python or Java to learn Git.

Sibling shared topics: `FRONTEND/` · `MYSQL/`

Optional trainer slides (not student notes): `Git_GitHub_Team_Session1.pptx` · `Git_GitHub_Team_Session2.pptx`
