Ticket: Library join report

Customer: College librarian
Request: Members and loans tables. Need a report: member name + book title + due date (INNER JOIN). Also list members with **no** loans (LEFT JOIN).

Files

- `seed/library_seed.sql` — run in MySQL Workbench on `training_db`
- `starter/queries.sql` — fill in the TODOs
- `broken/queries.sql` — fix the intentional bugs
- `solution/queries.sql` — reference

Done when

- [ ] Seed runs without error
- [ ] Join report returns rows
- [ ] Members-without-loans query works
