Ticket: First HelloJava compile/run

Customer: Lab instructor
Need: Prove JDK 17: `javac` then `java` on a public class.
Teaching-order: `public class` + `main` + `println` only. No `if` / loops / extra methods / Scanner.

Starter

Complete TODOs in `starter/HelloJava.java`.

Broken

`broken/HelloJava.java` will not compile or will not start. Fix it.

Done when

- [ ] File name matches `public class` name
- [ ] `javac HelloJava.java` then `java HelloJava` prints two lines
- [ ] `java -version` / `javac -version` show 17 (paste in notes)
