Ticket: AcmeHR / Admissions Field Cleaner

Customer: AcmeHR onboarding + admissions portal
Need: Clean email/phone from messy user input; mask phone for display.

Teaching-order: String methods + `for` / `if`. No extra methods. No `throw`.

Starter

Finish the three blocks in `starter/FieldCleaner.java`.

Broken

Off-by-one slices and wrong masking in `broken/FieldCleaner.java`.

Done when

- [ ] Email lowercased + trimmed
- [ ] Phone digits-only, length 10 check
- [ ] Mask like `******3210`
