MySQL (MySQL 8+)

Shared topic pack — used by Python Full Stack, Java Full Stack, and a MySQL-only course.
Not owned by `PYTHON/` or `JAVA/`.

Practice DB: `training_db` · **Start:** 00_MySQL_Setup_and_Connection.md

Two tracks, same files

Track	Open these	Later / stretch
Full stack (Weeks 10–11)	00 → 01 → 02 → 03 → 06 → 07 → 09	04, 05, 08, 11 until placement mocks
MySQL-only (~18 sessions)	00 through 09, then 11, then 12	Homework after each class

SQL depth lives here. Python/Java folders only hold the **bridge** (ER, why the backend talks SQL).

Python FS schedule: Weeks 10–11 — Session Calendar
Java FS schedule: Weeks 10–11 — Session Calendar

Teaching order

Order	Module	Track
1	00_MySQL_Setup_and_Connection.md	Both
2	01_Introduction_to_Databases.md	Both
3	02_Introduction_to_SQL_Basic_Concepts.md	Both
4	03_Querying_with_SQL.md	Both
5	04_Aggregations_and_Group_By.md	MySQL-only · FS stretch
6	05_Common_Concepts.md	MySQL-only · FS stretch
7	06_Modeling_Databases.md	Both
8	07_Joins.md	Both
9	08_Views_and_Subqueries.md	MySQL-only · FS stretch
10	09_Transactions_and_Indexes.md	Both
11	11_Window_Functions_and_CTEs.md	MySQL-only · FS stretch
12	12_Real_Time_Projects.md	MySQL-only capstone

Homework (use throughout): homework/10_Practice_Exercises.md — chapter-wise drills. Not a live-class topic; that is why it is not numbered in the table above.

Sample data: labs/training_db_seed.sql — run after setup, before querying homework (module 03+). See labs/README.md.

Suggested class plan (~18 sessions, MySQL-only)

Sessions	Modules	Notes
1–2	00, 01	Setup + database concepts; create `training_db`
3–4	02	CRUD, constraints, data types (`player` you CREATE yourself)
5–6	03	Filtering, sorting, pagination (seed loaded)
7–8	04, 05	Aggregations + string/date functions
9–10	06	Schema design and relationships
11–12	07	Joins — spend extra time here
13	08	Subqueries and views
14	09	Transactions, indexes, permissions
15	11	Window functions and CTEs
16–18	12	Real-time project capstone
