Ticket: Marks Entry Keeps Crashing

Customer: Class teacher
Bug: App crashes on `78.5` because it uses `int()`, and average print hides decimals.

Broken

Fix bugs in `broken/marks_entry.py`.

Done when

- [ ] Uses `float(...)` for each mark (accepts `78` and `78.5`)
- [ ] Average printed with 2 decimals (f-string)
- [ ] No `int(avg)` truncation

Stretch (after Flow Control): blank/letters → message + re-ask with `while`.
