Biweekly Assessment BW07 — Weeks 13–14

Sessions covered: S61–70
Topics: JavaScript DOM/forms, Django setup, URLs/views/templates, models/ORM/admin
Timebox: 45–60 minutes (homework or Friday of the even week).
Rules: Closed notes unless your trainer allows open notes. No copying.
Coding constraint: JS + Django MTV/ORM. Auth is next biweekly.

A. Multiple Choice (12)

Circle the best option.

1. DOM stands for:
   a) Document Object Model
   b) Data Object MySQL
   c) Django Object Mapper
   d) Deploy On Main
2. `document.querySelector` selects:
   a) DOM elements
   b) Git commits
   c) venv packages
   d) SQL rows
3. Client-side form validation helps:
   a) Deploy Django
   b) Create migrations
   c) Replace all server checks
   d) Catch bad input early UX
4. Django MTV: T is:
   a) Tuple
   b) Transaction
   c) Template
   d) Terminal
5. `python manage.py runserver`:
   a) Starts Django dev server
   b) Creates React app
   c) Drops MySQL
   d) Pushes git
6. URL pattern maps to a:
   a) CSS file only
   b) Git hook
   c) npm package
   d) View function/class
7. `{% extends "base.html" %}`:
   a) React router
   b) pip install
   c) Inheritance for templates
   d) SQL join

8. Django model field maps roughly to:
   a) An npm script
   b) A DB column
   c) A CSS class
   d) A git branch
9. `makemigrations` then `migrate`:
   a) Creates/applies schema changes
   b) Only collects static
   c) Only runs tests
   d) Only opens admin
10. Django admin is useful to:
    a) Replace React
    b) Host MySQL
    c) Write CSS
    d) Quickly CRUD model data
11. `HttpResponse` / `render` live in:
    a) Gitignore
    b) Postman only
    c) Views
    d) Settings only
12. Static files are typically:
    a) Only SQL dumps
    b) CSS/JS/images
    c) Only migrations
    d) Only secrets

B. Coding (2)

1. Write a tiny JS snippet: on button click, read an input value and show it in a `<p>` (DOM).

```
# your code
```

2. Sketch Django: `urlpatterns` for home + about, and two view functions that render templates extending `base.html`.

```
# your code
```

C. Short answer (1)

Why is server-side validation still required if JS validates the form?

(Write 3–6 sentences.)
