Ticket: Refactor HDFC Bank ATM Into Methods

Customer: HDFC Bank tech lead
Need: Same ATM behaviour, but logic in **static methods** (no giant `main`).

Teaching-order: One class. Static methods + `return`. Validate with `print` + `return` — **no** `throw`. No `new` account object.

Starter

Fill `deposit`, `withdraw`, `showMenu` in starter.

Broken

Ignored return value / overdraft still subtracts in `broken/`.

Done when

- [ ] Deposit / withdraw logic lives in methods (not a giant `main`)
- [ ] Bad amount or overdraft prints a message and leaves balance unchanged
- [ ] Menu repeats until Quit
