Ticket: Load training_db sample tables

Customer: Training lab
Need: One script students can run so homework queries have rows. No hunting `CREATE TABLE` across notes.

Files

- `training_db_seed.sql` — run in MySQL Workbench or the CLI

When to run

- **After** setup (`training_db` exists).
- **Before** querying homework (module 03+).
- Module 02 still has you `CREATE player` and `employee` yourself — those tables are **not** in the seed.

Re-running the script is safe. It replaces only the drill tables listed in the file. It does not drop `player` or `employee`.

How to run

Workbench: File → Run SQL Script → `MYSQL/labs/training_db_seed.sql` → execute.

CLI (from the repo root):

```
mysql -u root -p < MYSQL/labs/training_db_seed.sql
```

Done when

- [ ] `USE training_db;` then `SHOW TABLES;` lists `product`, `movie`, `student`, `course`, and the other drill tables
- [ ] `SELECT COUNT(*) FROM product;` returns rows
- [ ] You can start homework chapter 03
