Ticket: Expense Tracker CSV Export

Customer: Employee Management Portal accounts team
Request: CLI that records expenses and can export to CSV. Errors must be logged, not crash silently.

Your job (starter)

1. Open `starter/expense_tracker.py`.
2. Implement `add_expense` and `export_csv`.
3. Run: `python expense_tracker.py`.

Debug lab (broken)

Open `broken/expense_tracker.py` — fix the three bugs described in comments.

Seed

`seed/sample_expenses.csv` — use for import stretch.

Done when

- [ ] At least 3 expenses in memory or file
- [ ] CSV export opens in Excel/Sheets
- [ ] Invalid amount does not crash (clear message)
