Ticket: Contact Book

Customer: Placement cell
Need: Dict of name → phone; add, lookup, delete, list (menu).

Starter

Build the menu in `starter/contact_book.py` (script style — no `def` yet).

Broken

KeyError crashes in `broken/contact_book.py`.

Done when

- [ ] Lookup missing name does not crash (use `.get` or `in`)
- [ ] Add / delete / list work from a menu

Stretch (after Files / JSON week): save and load `contacts.json`.
